

Practice Examples – Repetition Structures

While Loops

1. Basic While Loop

- Write a program that will count to 10
- Write a program that will count to the value a user enters

2. Repeated Code

Write a program that will calculate the commission based on the commission rate and the sales.

3. Repeated Code – Solution

Write a program that will calculate the commission based on the commission rate and the sales for numerous employees.

4. Accumulators (and augmented assignment operators)

Write a number that will sum 5 (or a x-number) of values. Print the final amount.

5. Draw a square

Write a program that enters the size of the square and the character you want the square to be drawn with.

For Loops

6. Basic For Loop

- Write a program that will count to 10
- Write a program that will count to the value a user enters
- Write a program that will count from 100 to 0 in increments of 2

7. Vat increase

The price of a specific laptop is R10 000.00. The vat for the current year (2025) is 15%. Vat will increase each year for the following 2 years with 0.5%

Use a for loop to calculate and display the laptop price for 2025 to 2027 with the adjusted tax.
