

# Chapter 6: File input / output – Practice Examples V1

## 1. File Creation:

Write a function that creates a text file, called myFile, and write “Hello world” to that file

## 2. File Creation V2:

Write a function that creates a text file, called Employees, and write the following names to that file:

- John Doe
- Jane Dunning
- James Potter

## 3. Read File:

Write a function that reads the text file, Employees, and print all the names in that file.

## 4. Append File:

Write a function that reads a text file, Employees, only if it exists, and append the following names to that file:

- Hermione Granger
- Harry Potter
- Ron Weasley

## 5. Who’s going? :

A student won a trip to Gold Reef City. Write a function that prompts the student to enter 3 names (of his friends) he wishes to join him on the trip. It should then be saved in a text file called “Trip.txt”.

Write another function that then reads the names of the friends and print it.

## 6. Who’s going? Part 2:

Amend the code from 5, where you should add the contribution amount the students are willing to add to fuel fund and write it to the text file.

Write another function that reads data and print it to the user.

## 7. Sum Num:

Write a function that asks the user to enter 3 numbers to sum and save it in a text file.

Write a function that read the 3 numbers, sum it and print the total.

## 8. Sales:

Write a function that asks the user how many days they have sales for. The user should then enter the sales for each day and save it to a text file called "Sales.txt"

## 9. Read Sales:

Write a function that opens the Sales file and sum all the values together.
